INTEGRA Holding AG is refocusing its Aquametro Group

The INTEGRA Group announces the merger of its water- and energy-metering business, known as Aquametro, with the French company Yzatec, into the newly formed company, INTEGRA METERING, based in Therwil, Switzerland and Toulouse, France. Both companies' technologies and product portfolios are adding up ideally and are fully complementary.

Aquametro AG has been developing, manufacturing and selling water and thermal energy meters for the last eighty years and benefits from a leading market position in Switzerland. Its products such as CALEC®, a multifunctional high precision calculator for thermal and cooling energy, and AMFLO® MAG Smart, especially designed for district cooling applications, are successfully sold worldwide. Aquametro operates branch offices in Germany, Belgium, Dubai, Singapore amongst others.

Yzatec S.A.S. is a young and dynamic technology company, which has developed a very strong, unique and clearly differentiated technology portfolio in the area of flow measurement technology. Yzatec offers its own range of smart large-diameter irrigation and potable water meters.

The merger forms part of the development strategy to refocus INTEGRA's water- and energy-metering activities. Aquametro's "Oil and Marine" business has been carved out in June 2017 into a new and independent company "Aquametro Oil & Marine AG", based in Therwil, Switzerland and Rostock, Germany - under the umbrella of INTEGRA Holding AG.

INTEGRA METERING AG will focus its activities on developing, manufacturing and distributing internationally its smart metering solutions, in the fields of Water and Thermal Energy.

The sales and service organizations in Switzerland and Germany will continue to operate under the well-known and established brand of "Aquametro AG" and "Aquametro Messtechnik GmbH" respectively.

We are fully convinced that these two independent and clearly focused organizations, Integra Metering and Aquametro, will enable us to serve our customers best.
